Selected Projects

Fingerprint Mobile Devices using Camera Sensor Imperfections   **May. 2017–Dec. 2017**

➢ Applied deep learning to extract sensor imperfections as fingerprint from taken photos to uniquely identify mobile devices.

➢ Proposed a novel CNN model, exploiting data augmentation, denoising autoencoder, triplet loss to boost model's performance.

➢ Evaluated on over 16000 photos (Dresden dataset) taken by 74 cameras and achieved 91% accuracy.

Enable Mobile Deep Learning Training with Data Privacy   **May. 2016–Jul. 2016**

➢ Proposed a crowd-learning protocol for deep learning training over multiple mobile devices, with training data maintained within data owners mobile devices without any privacy compromise throughout the whole training process.

➢ Implemented the prototype with Torch, proved its efficiency and demonstrated its privacy protection in our testbed.

Accountable Protocols for Big Data Trading   **Feb. 2016–May. 2016**

- ➢ Proposed accountable protocols for big data trading among dishonest consumers to detect trading-related misbehaviors (tax evasion, denial of purchase, resale of others datasets, etc.), covering text, image, video, table and graph data types.
- ➢ Achieved rigorous accountability (fairness & completeness), big data processing performance and high quality of service.

Big Data Trading Platform   **Feb. 2015–Dec. 2015**
- ➢ Built a big data trading platform with fine-grained access control (row, column, user-specific) from scratch in 8 servers.
- ➢ Developed and configured backend with Hadoop, Hbase, SQL database and wrote frontend with HTML, CSS, JavaScript.

De-anonymizing Social Networks with Knowledge Graph   **Jun. 2015–Jul. 2015**
- ➢ Leveraged knowledge graph to explicitly express arbitrary prior knowledge of the attacker for any individual user.
- ➢ Introduced BFS and LHS for fast graph matching, and efficiently de-anonymized targeted user identities and privacy attributes.

Graph-based Privacy Preserving Data Publishing   **Mar. 2015–Jun. 2015**
- ➢ Proposed a graph-based framework for data publishing, which accommodates most state-of-art privacy protection approaches.
- ➢ Coordinated modules like publishing data representation, adversary capability modeling, privacy and utility quantification, and universal partitioning algorithms for data anonymization, all simply with the aid of the graph concepts.
